Block Guide
V01.00

Original Release Date: 13 JUN 2003
Revised: 13 JUN 2003

TSPG 8/16 Bit Division
Motorola, Inc.

Motorola reserves the right to make changes without further notice to any products herein. Motorola makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Motorola assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. “Typical” parameters which may be provided in Motorola data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including “Typicals” must be validated for each customer application by customer’s technical experts. Motorola does not convey any license under its patent rights nor the rights of others. Motorola products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the Motorola product could create a situation where personal injury or death may occur. Should Buyer purchase or use Motorola products for any such unintended or unauthorized application, Buyer shall indemnify and hold Motorola and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Motorola was negligent regarding the design or manufacture of the part. Motorola and Ⓜ are registered trademarks of Motorola, Inc. Motorola, Inc. is an Equal Opportunity/Affirmative Action Employer.

Section 1 Introduction

1.1 Overview

The Port Integration Module (PIM) establishes the interface between the peripheral modules and the I/O pins for all ports except AD0 and AD1.

NOTE: *Port A, B, E, and K are related to the core logic and multiplexed external bus interface (MEBI). Many of these port/pads logic come from the Core module and pass through the PIM module. Brief functional descriptions of these ports are provided for completeness. Refer to HCS12 Core User Guide for details.*

This section covers:

- Port T connected to TIMER module
- The serial port S associated with 2 SCI and 1 SPI module
- Port M associated with 3 CAN modules - CAN0, CAN1 and CAN4, the SPI module associated with port S
- Port J assoicated with 1 IIC module and the CAN4 module, which can also be used as an external interrupt source
- Port H associated with the two SPI modules - SPI1 and SPI2 . These ports can also be used as external interrupt sources.
- Port P connected to either the PWM or the two SPI modules associated with Port H, which also can be used as an external interrupt source

Each I/O pin can be configured by several registers in order to select data direction and drive strength, to enable and select pull-up or pull-down resistors. On certain pins also interrupts can be enabled which result in status flags.

The I/O’s of 2 CAN and all 3 SPI modules can be routed from their default location to determined pins.

The implementation of the Port Integration Module is device dependent.

1.2 Features

A standard port has the following minimum features:

- Input/output selection
- 3.3V/5V output drive with two selectable drive strength
- 3.3V/5V digital and analog input
- Input with selectable pull-up or pull-down device

Optional features:

- Open drain for wired-or connections
- Interrupt inputs with glitch filtering

1.3 Block Diagram

Figure 1-1 is a block diagram of the PIM_9KT256.

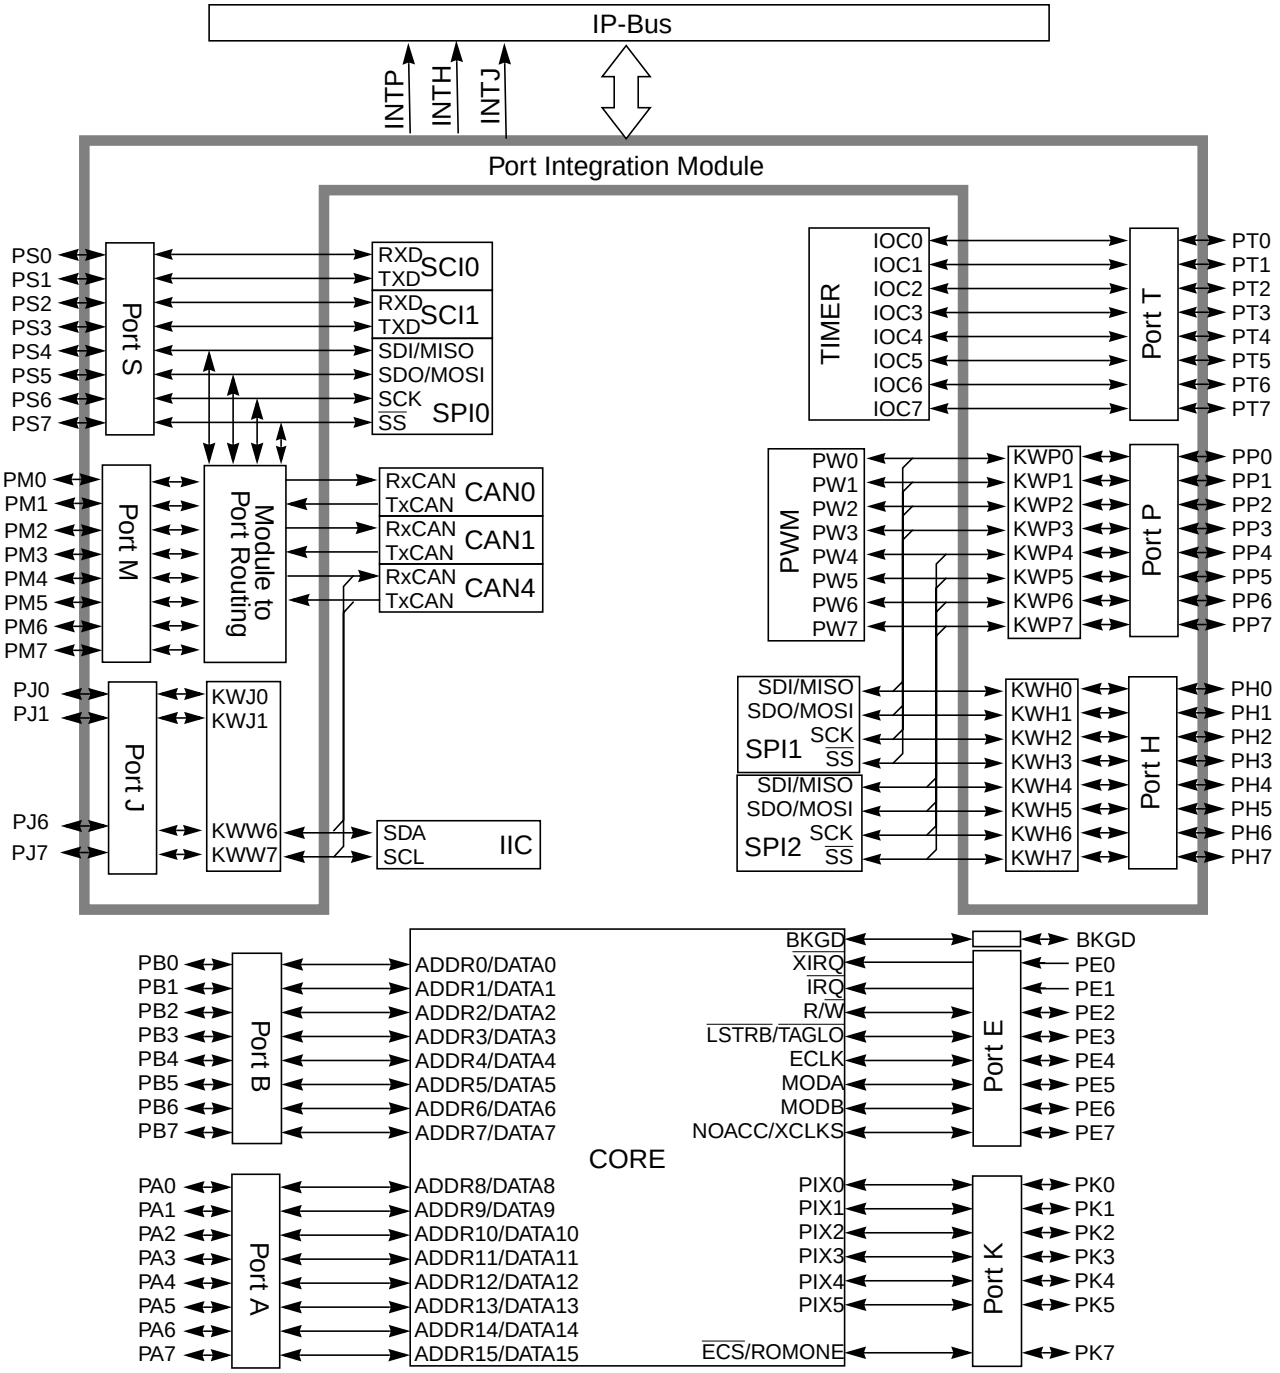

Figure 1-1 PIM_9KT256 Block Diagram

Section 2 External Signal Description

2.1 Overview

This section lists and describes the signals that do connect off chip.

NOTE: *Refer to the Creation Guide and the Integration Guide documentation of the PIM_9KT256 for a detailed description of the pad control signals.*

2.2 Signal properties

Table 2-1 shows all the pins and their functions that are controlled by the PIM_9KT256. If there is more than one function associated with a pin, the priority is indicated by the position in the table from top (highest priority) to down (lowest priority). All pins have reset state as input.

Table 2-1 Pin Functions and Priorities

Port	Pin Name	Pin Function & Priority	Description	Pull mode after Reset	Pin Function after Reset
Port T	PT[7:0]	IOC[7:0]	Timer Channels 7 to 0	Hi-Z	GPIO
		GPIO	General-purpose I/O		
Port S	PS7	$\overline{SS0}$	Serial Peripheral Interface 0 slave select output in master mode, input in slave mode or master mode.	Pull-up	GPIO
		GPIO	General-purpose I/O		
	PS6	SCK0	Serial Peripheral Interface 0 serial clock pin		
		GPIO	General-purpose I/O		
	PS5	MOSI0	Serial Peripheral Interface 0 master out/slave in pin		
		GPIO	General-purpose I/O		
	PS4	MISO0	Serial Peripheral Interface 0 master in/slave out pin		
		GPIO	General-purpose I/O		
	PS3	TXD1	Serial Communication Interface 1 transmit pin		
		GPIO	General-purpose I/O		
	PS2	RXD1	Serial Communication Interface 1 receive pin		
		GPIO	General-purpose I/O		
	PS1	TXD0	Serial Communication Interface 0 transmit pin		
		GPIO	General-purpose I/O		
	PS0	RXD0	Serial Communication Interface 0 receive pin		
		GPIO	General-purpose I/O		

Port	Pin Name	Pin Function & Priority	Description	Pull mode after Reset	Pin Function after Reset
Port M	PM7	TXCAN4	MSCAN4 transmit pin	Hi-Z	GPIO
		GPIO	General-purpose I/O		
	PM6	RXCAN4	MSCAN4 receive pin		
		GPIO	General-purpose I/O		
	PM5	TXCAN0	MSCAN0 transmit pin		
		TXCAN4	MSCAN4 transmit pin		
		SCK0	Serial Peripheral Interface 0 serial clock pin		
		GPIO	General-purpose I/O		
	PM4	RXCAN0	MSCAN0 receive pin		
		RXCAN4	MSCAN4 receive pin		
		MOSI0	Serial Peripheral Interface 0 master out/slave in pin		
		GPIO	General-purpose I/O		
	PM3	TXCAN1	MSCAN1 transmit pin		
		TXCAN0	MSCAN0 transmit pin		
		$\overline{SS0}$[1]	Serial Peripheral Interface 0 slave select output in master mode, input for slave mode or master mode.		
		GPIO	General-purpose I/O		
	PM2	RXCAN1	MSCAN1 receive pin		
		RXCAN0	MSCAN0 receive pin		
		MISO0[1]	Serial Peripheral Interface 0 master in/slave out pin		
		GPIO	General-purpose I/O		
	PM1	TXCAN0	MSCAN0 transmit pin		
		GPIO	General-purpose I/O		
	PM0	RXCAN0	MSCAN0 receive pin		
		GPIO	General-purpose I/O		

Port	Pin Name	Pin Function & Priority	Description	Pull mode after Reset	Pin Function after Reset
Port P	PP7	PWM7	Pulse Width Modulator channel 7	Hi-Z	GPIO
		SCK2	Serial Peripheral Interface 2 serial clock pin		
		GPIO/KWP7	General-purpose I/O with interrupt		
	PP6	PWM6	Pulse Width Modulator channel 6		
		$\overline{SS2}$	Serial Peripheral Interface 2 slave select output in master mode, input in slave mode or master mode.		
		GPIO/KWP6	General-purpose I/O with interrupt		
	PP5	PWM5	Pulse Width Modulator channel 5		
		MOSI2	Serial Peripheral Interface 2 master out/slave in pin		
		GPIO/KWP5	General-purpose I/O with interrupt		
	PP4	PWM4	Pulse Width Modulator channel 4		
		MISO2	Serial Peripheral Interface 2 master in/slave out pin		
		GPIO/KWP4	General-purpose I/O with interrupt		
	PP3	PWM3	Pulse Width Modulator channel 3		
		$\overline{SS1}$	Serial Peripheral Interface 1 slave select output in master mode, input in slave mode or master mode.		
		GPIO/KWP3	General-purpose I/O with interrupt		
	PP2	PWM2	Pulse Width Modulator channel 2		
		SCK1	Serial Peripheral Interface 1 serial clock pin		
		GPIO/KWP2	General-purpose I/O with interrupt		
	PP1	PWM1	Pulse Width Modulator channel 1		
		MOSI1	Serial Peripheral Interface 1 master out/slave in pin		
		GPIO/KWP1	General-purpose I/O with interrupt		
	PP0	PWM0	Pulse Width Modulator channel 0		
		MISO1	Serial Peripheral Interface 1 master in/slave out pin		
		GPIO/KWP0	General-purpose I/O with interrupt		

Port	Pin Name	Pin Function & Priority	Description	Pull mode after Reset	Pin Function after Reset
Port H	PH7	$\overline{SS2}$	Serial Peripheral Interface 2 slave select output in master mode, input in slave mode or master mode.	Hi-Z	GPIO
		GPIO/KWH7	General-purpose I/O with interrupt		
	PH6	SCK2	Serial Peripheral Interface 2 serial clock pin		
		GPIO/KWH6	General-purpose I/O with interrupt		
	PH5	MOSI2	Serial Peripheral Interface 2 master out/slave in pin		
		GPIO/KWH5	General-purpose I/O with interrupt		
	PH4	MISO2	Serial Peripheral Interface 2 master in/slave out pin		
		GPIO/KWH4	General-purpose I/O with interrupt		
	PH3	$\overline{SS1}$	Serial Peripheral Interface 1 slave select output in master mode, input in slave mode or master mode.		
		GPIO/KWH3	General-purpose I/O with interrupt		
	PH2	SCK1	Serial Peripheral Interface 1 serial clock pin		
		GPIO/KWH2	General-purpose I/O with interrupt		
	PH1	MOSI1	Serial Peripheral Interface 1 master out/slave in pin		
		GPIO/KWH1	General-purpose I/O with interrupt		
	PH0	MISO1	Serial Peripheral Interface 1 master in/slave out pin		
		GPIO/KWH0	General-purpose I/O with interrupt		
Port J	PJ7	TXCAN4	MSCAN4 transmit pin	Pull-up	GPIO
		SCL	Inter Integrated Circuit serial clock line		
		GPIO/KWJ7	General-purpose I/O with interrupt		
	PJ6	RXCAN4	MSCAN4 receive pin		
		SDA	Inter Integrated Circuit serial data line		
		GPIO/KWJ6	General-purpose I/O with interrupt		
	PJ1	GPIO/KWJ1	General-purpose I/O with interrupt		
	PJ0	GPIO/KWJ0	General-purpose I/O with interrupt		

NOTES:

1. If CAN0 is routed to PM[3:2] the SPI0 can still be used in bidirectional master mode. *Refer to SPI Block Guide for details.*

Section 3 Memory Map/Register Definition

3.1 Overview

This section provides a detailed description of all registers.

3.2 Module Memory Map

Table 3-1 shows the register map of the Port Integration Module.

Table 3-1 PIM_9KT256 Memory Map

Address offset	Use	Access
$00	Port T I/O Register (PTT)	RW
$01	Port T Input Register (PTIT)	R
$02	Port T Data Direction Register (DDRT)	RW
$03	Port T Reduced Drive Register (RDRT)	RW
$04	Port T Pull Device Enable Register (PERT)	RW
$05	Port T Polarity Select Register (PPST)	RW
$06	Reserved	-
$07	Reserved	-
$08	Port S I/O Register (PTS)	RW
$09	Port S Input Register (PTIS)	R
$0A	Port S Data Direction Register (DDRS)	RW
$0B	Port S Reduced Drive Register (RDRS)	RW
$0C	Port S Pull Device Enable Register (PERS)	RW
$0D	Port S Polarity Select Register (PPSS)	RW
$0E	Port S Wired-Or Mode Register (WOMS)	RW
$0F	Reserved	-
$10	Port M I/O Register (PTM)	RW
$11	Port M Input Register (PTIM)	R
$12	Port M Data Direction Register (DDRM)	RW
$13	Port M Reduced Drive Register (RDRM)	RW
$14	Port M Pull Device Enable Register (PERM)	RW
$15	Port M Polarity Select Register (PPSM)	RW
$16	Port M Wired-Or Mode Register (WOMM)	RW
$17	Module Routing Register	RW
$18	Port P I/O Register (PTP)	RW
$19	Port P Input Register (PTIP)	R
$1A	Port P Data Direction Register (DDRP)	RW
$1B	Port P Reduced Drive Register (RDRP)	RW
$1C	Port P Pull Device Enable Register (PERP)	RW
$1D	Port P Polarity Select Register (PPSP)	RW
$1E	Port P Interrupt Enable Register (PIEP)	RW
$1F	Port P Interrupt Flag Register (PIFP)	RW
$20	Port H I/O Register (PTH)	RW

$21	Port H Input Register (PTIH)	R
$22	Port H Data Direction Register (DDRH)	RW
$23	Port H Reduced Drive Register (RDRH)	RW
$24	Port H Pull Device Enable Register (PERH)	RW
$25	Port H Polarity Select Register (PPSH)	RW
$26	Port H Interrupt Enable Register (PIEH)	RW
$27	Port H Interrupt Flag Register (PIFH)	RW
$28	Port J I/O Register (PTJ)	RW[1]
$29	Port J Input Register (PTIJ)	R
$2A	Port J Data Direction Register (DDRJ)	RW[1]
$2B	Port J Reduced Drive Register (RDRJ)	RW[1]
$2C	Port J Pull Device Enable Register (PERJ)	RW[1]
$2D	Port J Polarity Select Register (PPSJ)	RW[1]
$2E	Port J Interrupt Enable Register (PIEJ)	RW[1]
$2F	Port J Interrupt Flag Register (PIFJ)	RW[1]
$30 – $3F	Reserved	-

NOTES:

1. Write access not applicable for one or more register bits. Please refer to detailed signal description.

NOTE: *Register Address = Base Address + Address Offset, where the Base Address is defined at the MCU level and the Address Offset is defined at the module level.*

3.3 Register Descriptions

The following table summarizes the effect on the various configuration bits, data direction (DDR), output level (I/O), reduced drive (RDR), pull enable (PE), pull select (PS) and interrupt enable (IE) for the ports. The configuration bit PS is used for two purposes:

1. Configure the sensitive interrupt edge (rising or falling), if interrupt is enabled.
2. Select either a pull-up or pull-down device if PE is active.

Table 3-2 Pin Configuration Summary

DDR	IO	RDR	PE	PS	IE[1]	Function	Pull Device	Interrupt
0	X	X	0	X	0	Input	Disabled	Disabled
0	X	X	1	0	0	Input	Pull Up	Disabled
0	X	X	1	1	0	Input	Pull Down	Disabled
0	X	X	0	0	1	Input	Disabled	falling edge
0	X	X	0	1	1	Input	Disabled	rising edge
0	X	X	1	0	1	Input	Pull Up	falling edge
0	X	X	1	1	1	Input	Pull Down	rising edge
1	0	0	X	X	0	Output, full drive to 0	Disabled	Disabled
1	1	0	X	X	0	Output, full drive to 1	Disabled	Disabled
1	0	1	X	X	0	Output, reduced drive to 0	Disabled	Disabled
1	1	1	X	X	0	Output, reduced drive to 1	Disabled	Disabled
1	0	0	X	0	1	Output, full drive to 0	Disabled	falling edge
1	1	0	X	1	1	Output, full drive to 1	Disabled	rising edge
1	0	1	X	0	1	Output, reduced drive to 0	Disabled	falling edge
1	1	1	X	1	1	Output, reduced drive to 1	Disabled	rising edge

NOTES:
1. Applicable only on port P, H and J.

NOTE: *All bits of all registers in this module are completely synchronous to internal clocks during a register read.*

3.3.1 Port T Registers

Address Offset: $__00

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write	PTT7	PTT6	PTT5	PTT4	PTT3	PTT2	PTT1	PTT0
TIMER:	IOC7	IOC6	IOC5	IOC4	IOC3	IOC2	IOC1	IOC0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-1 Port T I/O Register (PTT)

Read:Anytime.

Write:Anytime.

If the data direction bits of the associated I/O pins are set to 1, a read returns the value of the port register, otherwise the value at the pins is read.

Address Offset: $__01

	Bit 7	6	5	4	3	2	1	Bit 0
Read:	PTIT7	PTIT6	PTIT5	PTIT4	PTIT3	PTIT2	PTIT1	PTIT0
Write:								
Reset:	-	-	-	-	-	-	-	-

= Reserved or unimplemented

Figure 3-2 Port T Input Register (PTIT)

Read:Anytime.

Write:Never, writes to this register have no effect.

This register always reads back the status of the associated pins. This can also be used to detect overload or short circuit conditions on output pins.

Address Offset: $__02

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	DDRT7	DDRT6	DDRT5	DDRT4	DDRT3	DDRT2	DDRT1	DDRT0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-3 Port T Data Direction Register (DDRT)

Read:Anytime.

Write:Anytime.

This register configures each port T pin as either input or output.
The TIMER forces the I/O state to be an output for each timer port associated with an enabled output compare. In these cases the data direction bits will not change.
The DDRT bits revert to controlling the I/O direction of a pin when the associated timer output compare is disabled.
The timer input capture always monitors the state of the pin.

DDRT[7:0] — Data Direction Port T

1 = Associated pin is configured as output.
0 = Associated pin is configured as input.

Due to internal synchronization circuits, it can take up to 2 bus cycles until the correct value is read on PTT or PTIT registers, when changing the DDRT register.

Address Offset: $__03

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	RDRT7	RDRT6	RDRT5	RDRT4	RDRT3	RDRT2	RDRT1	RDRT0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-4 Port T Reduced Drive Register (RDRT)

Read:Anytime.

Write:Anytime.

This register configures the drive strength of each port T output pin as either full or reduced. If the port is used as input this bit is ignored.

RDRT[7:0] — Reduced Drive Port T

1 = Associated pin drives at about 1/6 of the full drive strength.
0 = Full drive strength at output.

Address Offset: $__04

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	PERT7	PERT6	PERT5	PERT4	PERT3	PERT2	PERT1	PERT0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-5 Port T Pull Device Enable Register (PERT)

Read:Anytime.

Write:Anytime.

This register configures whether a pull-up or a pull-down device is activated, if the port is used as input. This bit has no effect if the port is used as output. Out of reset no pull device is enabled.

PERT[7:0] — Pull Device Enable Port T

1 = Either a pull-up or pull-down device is enabled.
0 = Pull-up or pull-down device is disabled.

Address Offset: $__05

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	PPST7	PPST6	PPST5	PPST4	PPST3	PPST2	PPST1	PPST0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-6 Port T Polarity Select Register (PPST)

Read:Anytime.

Write:Anytime.

This register selects whether a pull-down or a pull-up device is connected to the pin.

PPST[7:0] — Pull Select Port T

1 = A pull-down device is connected to the associated port T pin, if enabled by the associated bit in register PERT and if the port is used as input.

0 = A pull-up device is connected to the associated port T pin, if enabled by the associated bit in register PERT and if the port is used as input.

3.3.2 Port S Registers

Address Offset: $__08

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	PTS7	PTS6	PTS5	PTS4	PTS3	PTS2	PTS1	PTS0
SPI/SCI	$\overline{SS0}$	SCK0	MOSI0	MISO0	TXD1	RXD1	TXD0	RXD0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-7 Port S I/O Register (PTS)

Read:Anytime.

Write:Anytime.

If the data direction bits of the associated I/O pins are set to 1, a read returns the value of the port register, otherwise the value at the pins is read.
The SPI pins (PS[7:4]) configuration is determined by several status bits in the SPI module. *Refer to SPI Block Guide for details*.
The SCI ports associated with transmit pins 3 and 1 are configured as outputs if the transmitter is enabled. The SCI pins associated with receive pins 2 and 0 are configured as inputs if the receiver is enabled. *Refer to SCI Block Guide for details*.

Address Offset: $__09

	Bit 7	6	5	4	3	2	1	Bit 0
Read:	PTIS7	PTIS6	PTIS5	PTIS4	PTIS3	PTIS2	PTIS1	PTIS0
Write:								
Reset:	-	-	-	-	-	-	-	-

= Reserved or unimplemented

Figure 3-8 Port S Input Register (PTIS)

Read:Anytime.

Write:Never, writes to this register have no effect.

This register always reads back the status of the associated pins. This also can be used to detect overload or short circuit conditions on output pins.

Address Offset:$__0A

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	DDRS7	DDRS6	DDRS5	DDRS4	DDRS3	DDRS2	DDRS1	DDRS0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-9 Port S Data Direction Register (DDRS)

Read:Anytime.

Write:Anytime.

This register configures each port S pin as either input or output
If SPI is enabled, the SPI determines the pin direction. *Refer to SPI Block Guide for details.*
If the associated SCI transmit or receive channel is enabled this register has no effect on the pins. The pin is forced to be an output if a SCI transmit channel is enabled, it is forced to be an input if the SCI receive channel is enabled.
The DDRS bits revert to controlling the I/O direction of a pin when the associated channel is disabled.

DDRS[7:0] — Data Direction Port S
1 = Associated pin is configured as output.
0 = Associated pin is configured as input.

Due to internal synchronization circuits, it can take up to 2 bus cycles until the correct value is read on PTS or PTIS registers, when changing the DDRS register.

Address Offset: $__0B

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	RDRS7	RDRS6	RDRS5	RDRS4	RDRS3	RDRS2	RDRS1	RDRS0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-10 Port S Reduced Drive Register (RDRS)

Read:Anytime.

Write:Anytime.

This register configures the drive strength of each port S output pin as either full or reduced. If the port is used as input this bit is ignored.

RDRS[7:0] — Reduced Drive Port S

1 = Associated pin drives at about 1/6 of the full drive strength.

0 = Full drive strength at output.

Address Offset: $__0C

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	PERS7	PERS6	PERS5	PERS4	PERS3	PERS2	PERS1	PERS0
Reset:	1	1	1	1	1	1	1	1

= Reserved or unimplemented

Figure 3-11 Port S Pull Device Enable Register (PERS)

Read:Anytime.

Write:Anytime.

This register configures whether a pull-up or a pull-down device is activated, if the port is used as input or as output in wired-or (open drain) mode. This bit has no effect if the port is used as push-pull output. Out of reset a pull-up device is enabled.

PERS[7:0] — Pull Device Enable Port S

1 = Either a pull-up or pull-down device is enabled.

0 = Pull-up or pull-down device is disabled.

Address Offset: $__0D

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	PPSS7	PPSS6	PPSS5	PPSS4	PPSS3	PPSS2	PPSS1	PPSS0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-12 Port S Polarity Select Register (PPSS)

Read:Anytime.

Write:Anytime.

This register selects whether a pull-down or a pull-up device is connected to the pin.

PPSS[7:0] — Pull Select Port S

1 = A pull-down device is connected to the associated port S pin, if enabled by the associated bit in register PERS and if the port is used as input.

0 = A pull-up device is connected to the associated port S pin, if enabled by the associated bit in register PERS and if the port is used as input or as wired-or output.

Address Offset: $__0E

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	WOMS7	WOMS6	WOMS5	WOMS4	WOMS3	WOMS2	WOMS1	WOMS0
Reset:	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-13 Port S Wired-Or Mode Register (WOMS)

Read:Anytime.

Write:Anytime.

This register configures the output pins as wired-or. If enabled the output is driven active low only (open-drain). A logic level of “1” is not driven. It applies also to the SPI and SCI outputs and allows a multipoint connection of several serial modules. This bit has no influence on pins used as inputs.

WOMS[7:0] — Wired-Or Mode Port S

1 = Output buffers operate as open-drain outputs.

0 = Output buffers operate as push-pull outputs.

3.3.3 Port M Registers

Address Offset: $__10

	Bit 7	6	5	4	3	2	1	Bit 0
Read: Write:	PTM7	PTM6	PTM5	PTM4	PTM3	PTM2	PTM1	PTM0
CAN0			TXCAN0	RXCAN0	TXCAN0	RXCAN0	TXCAN0	RXCAN0
CAN1					TXCAN1	RXCAN1		
CAN4	TXCAN4	RXCAN4	TXCAN4	RXCAN4				
SPI0			SCK0	MOSI0	$\overline{SS0}$	MISO0		
Reset	0	0	0	0	0	0	0	0

= Reserved or unimplemented

Figure 3-14 Port M I/O Register (PTM)

Read:Anytime.

Write:Anytime.

If the data direction bits of the associated I/O pins are set to 1, a read returns the value of the port register, otherwise the value at the pins is read.

PM[7:6]

The CAN4 function (TXCAN4 and RXCAN4) takes precedence over the general purpose I/O function if the CAN4 module is enabled. *Refer to MSCAN Block Guide for details.*

PM[5:4]

The CAN0 function (TXCAN0 and RXCAN0) takes precedence over the CAN4, the SPI0 and the general purpose I/O function if the CAN0 module is enabled. *Refer to MSCAN Block Guide for details.*
The CAN4 function (TXCAN4 and RXCAN4) takes precedence over the SPI0 and general purpose I/O function if the CAN4 module is enabled. *Refer to MSCAN Block Guide for details.*
The SPI0 function (SCK0 and MOSI0) takes precedence of the general purpose I/O function if the SPI0 is enabled. *Refer to SPI Block Guide for details.*

PM[3:2]

The CAN1 function (TXCAN1 and RXCAN1) takes precedence over the CAN0, the SPI0 and the general purpose I/O function if the CAN1 module is enabled. *Refer to MSCAN Block Guide for details.*

The SPI0 function ($\overline{SS0}$ and MISO0) takes precedence of the general purpose I/O function if the SPI0 is enabled. *Refer to SPI Block Guide for details.*

PM[1:0]

The CAN0 function (TXCAN0 and RXCAN0) takes precedence over the general purpose I/O function if the CAN0 module is enabled. *Refer to MSCAN Block Guide for details.*

Address Offset: $__11

Figure 3-16 Port M Data Direction Register (DDRM)

Read:Anytime.

Write:Anytime.

This register configures each port M pin as either input or output.
The CAN forces the I/O state to be an output for each port line associated with an enabled output (TXCAN4, and TXCAN0). It also forces the I/O state to be an input for each port line associated with an enabled input (RXCAN4 and RXCAN0). In those cases the data direction bits will not change.
The DDRM bits revert to controlling the I/O direction of a pin when the associated peripheral module is disabled.

DDRM[7:0] — Data Direction Port M
1 = Associated pin is configured as output.
0 = Associated pin is configured as input.

Due to internal synchronization circuits, it can take up to 2 bus cycles until the correct value is read on PTM or PTIM registers, when changing the DDRM register.

0 = No active edge pending.
Writing a “0” has no effect.

Section 4 Functional Description

4.1 General

Each pin can act as general purpose I/O. In addition the pin can act as an output from a peripheral module or an input to a peripheral module. **Table 4-1** summarizes the priority in case of multiple enabled modules trying to control a shared port.

Table 4-1 Summary of Functional Priority

Port	Priority[1]
T	TIMER > GPIO
S	SCI0, SCI1, SPI0 > GPIO
M	CAN0 > GPIO CAN1 >(routed) CAN0 > (routed) SPI0 > GPIO (routed) CAN0 > (routed) CAN4 > (routed) SPI0 > GPIO (routed) CAN4 > GPIO
P	PWM > SPI1, SPI2 > GPIO
H	SPI1, SPI2 > GPIO
J	CAN4 > IIC > GPIO
A	*Refer to MEBI in HCS12 Core User Guide for details*
B	
E	
K	
BKGD pin	*Refer to BDM in HCS12 Core User Guide for details*

NOTES:
1. Highest priority >... > lowest priority

A set of configuration registers is common to all ports. All registers can be written at any time, however a specific configuration might not become active.

Example:

A selected pull-up resistor does not become active while the port is used as a push-pull output.

4.1.1 I/O register

This register holds the value driven out to the pin if the port is used as a general purpose I/O.

Writing to this register has only an effect on the pin if the port is used as general purpose output. When reading this address, the value of the pins is returned if the data direction register bits are set to 0.

If the data direction register bits are set to 1, the contents of the I/O register is returned. This is independent of any other configuration (**Figure 4-1**).

4.1.2 Input register

This is a read-only register and always returns the value of the pin (**Figure 4-1**).

4.1.3 Data direction register

This register defines whether the pin is used as an input or an output.

If a peripheral module controls the pin the contents of the data direction register is ignored (**Figure 4-1**).

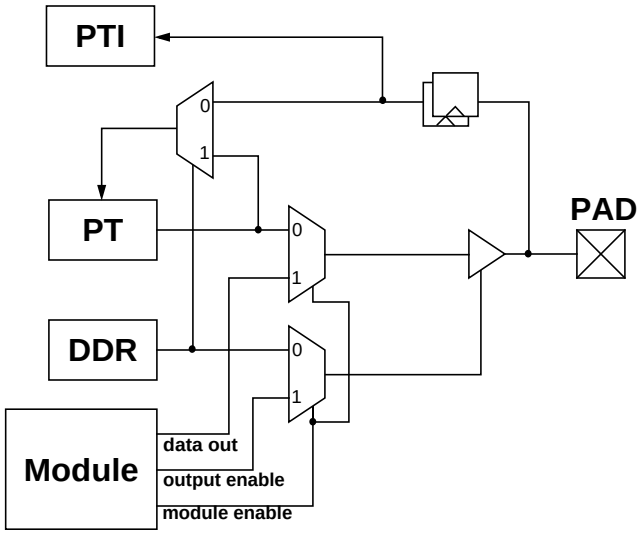

Figure 4-1 Illustration of I/O pin functionality

4.1.4 Reduced drive register

If the port is used as an output the register allows the configuration of the drive strength.

4.1.5 Pull device enable register

This register turns on a pull-up or pull-down device.

It becomes only active if the pin is used as an input or as a wired-or output.

4.1.6 Polarity select register

This register selects either a pull-up or pull-down device if enabled.

It becomes only active if the pin is used as an input. A pull-up device can be activated if the pin is used as a wired-or output.

4.2 Port T

This port is associated with the Timer module.

In all modes, port T pins PT[7:0] can be used for either general-purpose I/O, or with the channels of the Timer.

During reset, port T pins are configured as high-impedance inputs.

4.3 Port S

This port is associated with the serial SCI and SPI modules.

In all modes, port S pins PS[7:0] can be used either for general-purpose I/O, or with the SCI0, SCI1 and SPI0 subsystems.

During reset, port S pins are configured as inputs with pull-up.

The SPI0 pins can be re-routed. Refer to section **4.4.1**.

4.4 Port M

This port is associated with the SPI0 and 3 CAN modules.

In all modes, port M pins PM[7:0] can be used for either general purpose I/O, or with the CAN subsystems.

By default, pins PM0 and PM1 are used for the CAN0. If CAN0 is enabled the pins become CAN transmit and receive pins. Pins PM2-7 are shared amongst CAN0, CAN1, CAN4 and SPI0 module.

During reset, port M pins are configured as high-impedance inputs.

The CAN pins can be re-routed. Refer to section **4.4.1**.

4.4.1 Module Routing Register

This register allows to re-route the CAN0, CAN4, SPI0, SPI1 and SPI2 pins to predefined pins.

NOTE: *The purpose of the Module Routing Register is to provide maximum flexibility for future derivatives of the MC9S12KT256 with a lower number of MSCAN and SPI modules.*

Table 4-2 Implemented modules on derivatives

Number of modules	MSCAN modules			SPI modules		
	CAN0	CAN1	CAN4	SPI0	SPI1	SPI2
3	X	X	X	X	X	X
2	X	-	X	X	X	
1	X	-	-	X	-	

The CAN0 transmit and receive pin can be routed to PM[3:2] or PM[5:4]. CAN0 has priority over CAN4 if both modules are trying to access PM[5:4] at the same time.

The SPI0 pins can be routed to PM[5:2] if no other module uses these pins. If the SPI0 module is routed on PM[5:4] and used in bidirectional master mode with disabled $\overline{SS}$ output, PM[3:2] are free to be used with CAN or GPIO.

The SPI1 pins can be routed to PH[3:0].

4.5 Port P

This port is associated with the PWM and two SPI modules.

In all modes, port P pins PP[7:0] can be used for either general purpose I/O, or with the PWM and SPI subsystems.

The pins are shared between the PWM channels and the SPI1 and SPI2 module. If the PWM is enabled the pins become PWM output channels with the exception of pin 7 which can be PWM input or output. If SPI is/are enabled and PWM is disabled, the respective pin configuration is determined by several status bits in the SPI module.

During reset, port P pins are configured as high-impedance inputs.

The SPI pins can be re-routed. Refer to section **4.4.1**.

Port P offers 8 I/O pins with edge triggered interrupt capability in wired-or fashion. The interrupt enable as well as the sensitivity to rising or falling edges can be individually configured on per pin basis. All 8 bits/pins share the same interrupt vector. Interrupts can be used with the pins configured as inputs or outputs.

An interrupt is generated when a bit in the port interrupt flag register and its corresponding port interrupt enable bit are both set. This external interrupt feature is capable to wake up the CPU when it is in STOP or WAIT mode.

A digital filter on each pin prevents pulses (**Figure 4-3**) shorter than a specified time from generating an interrupt. The minimum time varies over process conditions, temperature and voltage (**Figure 4-2** and **Table 4-3**).

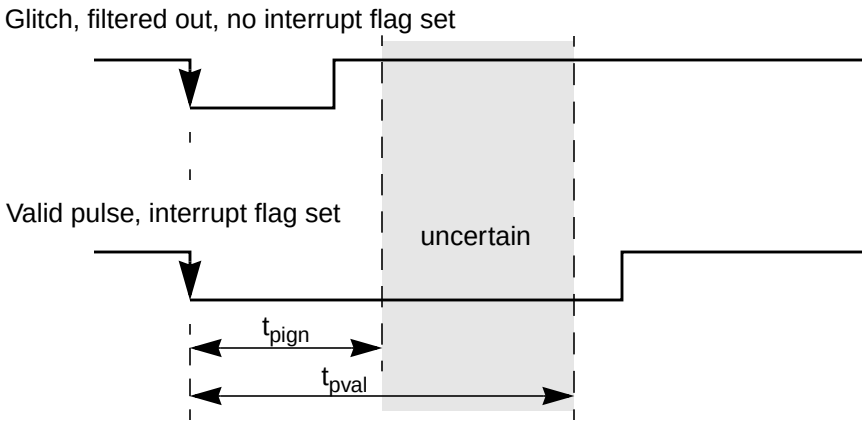

Figure 4-2 Interrupt Glitch Filter on Port P, H and J (PPS=0)

Table 4-3 Pulse Detection Criteria

Pulse	Mode		
	$\overline{STOP}$		STOP[1]
		Unit	
Ignored	$t_{pulse} \leq 3$	bus clocks	$t_{pulse} \leq t_{pign}$
Uncertain	$3 < t_{pulse} < 4$	bus clocks	$t_{pign} < t_{pulse} < t_{pval}$
Valid	$t_{pulse} \geq 4$	bus clocks	$t_{pulse} \geq t_{pval}$

NOTES:
1. These values include the spread of the oscillator frequency over temperature, voltage and process.

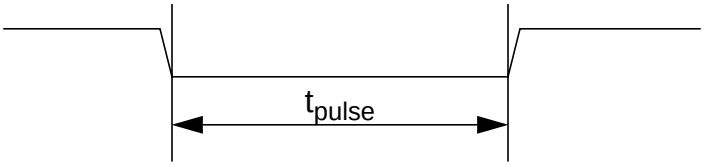

Figure 4-3 Pulse Illustration

A valid edge on an input is detected if 4 consecutive samples of a passive level are followed by 4 consecutive samples of an active level directly or indirectly.

The filters are continuously clocked by the bus clock in RUN and WAIT mode. In STOP mode the clock is generated by a single RC oscillator in the Port Integration Module. To maximize current saving the RC oscillator runs only if the following condition is true on any pin:

Sample count <= 4 and port interrupt enabled (PIE=1) and port interrupt flag not set (PIF=0).

4.6 Port H

This port is associated with the SPI1 and SPI2.

Port H pins PH[7:0] can be used for either general purpose I/O, or with the SPI subsystem.

During reset, port H pins are configured as high-impedance inputs.

Port H offers 8 I/O ports with the same interrupt features as port P.

4.7 Port J

This port is associated with the CAN4 and the IIC.

Port J pins PJ[1:0] can be used for general purpose I/O, while PJ[7:6] can be used for either general purpose I/O, the CAN4 and IIC subsystems.

During reset, port J pins are configured as inputs with pull-up.

If IIC takes precedence the pins become IIC open-drain output pins.

Port J offers 4 I/O ports with the same interrupt features as port P.

4.8 Port A, B, E, K, and BKGD pin

Most port and pin logic is located in the core module. *Refer to MEBI in HCS12 Core User Guide for details*

4.9 External Pin Descriptions

All ports start up as general purpose inputs on reset.

4.10 Low Power Options

4.10.1 Run Mode

No low power options exist for this module in run mode.

4.10.2 Wait Mode

No low power options exist for this module in wait mode.

4.10.3 Stop Mode

All clocks are stopped. There are however asynchronous paths to generate interrupts from STOP on port P, H and J.

Section 5 Initialization/Application Information

5.1 General

The reset values of all registers are given in the Register Description in section **3.3**.

5.2 Reset Initialization

All registers including the data registers get set/reset asynchronously. **Table 5-1** summarizes the port properties after reset initialization.

Table 5-1 Port Reset State Summary

Port	Reset States				
	Data Direction	Pull Mode	Red. Drive	Wired-Or Mode	Inter-rupt
T	input	hiz	disabled	n/a	n/a
S	input	pull-up	disabled	disabled	n/a
M	input	hiz	disabled	disabled	n/a
P	input	hiz	disabled	n/a	disabled
H	input	hiz	disabled	n/a	disabled
J	input	pull-up	disabled	n/a	disabled
A	*Refer to MEBI in HCS12 Core User Guide for details*				
B					
E					
K					
BKGD pin	*Refer to BDM in HCS12 Core User Guide for details*				

Section 6 Interrupts

6.1 General

Ports P, H and J generate a separate edge sensitive interrupt if enabled.

6.2 Interrupt Sources

Interrupt Source	Interrupt Flag	Local Enable	Global (CCR) Mask
Port P	PIFP[7:0]	PIEP[7:0]	I Bit
Port H	PIFH[7:0]	PIEH[7:0]	I Bit
Port J	PIFJ[7:6,1:0]	PIEJ[7:6,1:0]	I Bit

Table 6-1 Port Integration Module Interrupt Sources

NOTE: *Vector addresses and their relative interrupt priority are determined at the MCU level.*

6.3 Recovery from STOP

The PIM_9KT256 can generate wake-up interrupts from STOP on ports P, H and J. For other sources of external interrupts refer to the respective Block Guides.
