

ASM1233D, ASM1233D-L, ASM1233M

Low Power, 5 V/3.3 V, μP Reset, Active LOW, Open-Drain Output

Description

The ASM1233D-L/1233D/1233M are voltage supervisors with low-power, 5/3.3 V μP Reset, with an active LOW, open-drain output. Maximum supply current over temperature is 15 μA for 3.3 V devices and 20 μA for 5 V devices.

The ASM1233D-L/1233D/1233M generates an active LOW reset signal whenever the monitored supply is out of tolerance. A precision reference and comparator circuit monitors power supply (V_{CC}) level. The tolerances are 5%, 10% and 15%. When an out-of-tolerance condition is detected, an internal power-fail signal is generated which forces an active LOW reset signal. After V_{CC} returns to an in-tolerance condition, the reset signal remains active for 350 ms to allow the power supply and system microprocessor to stabilize.

The ASM1233D-L/1233D/1233M is designed with an open drain output stage and operates over the extended industrial temperature range. These devices are available in compact SOT-223, SO-8 and TO-92 packages.

Other low power products in this family include ASM1810/11/12/15/16/17.

Features

- Low Supply Current
- 15 μA Maximum (≤ 3.6 V), 20 μA Maximum (5.5 V)
- Automatically Restarts a Microprocessor after Power Failure
- 350 ms Reset Delay after V_{CC} Returns to an In-tolerance Condition
- Active LOW Power-up Reset, 5 kΩ Internal Pull-up
- Precision Temperature-compensated Voltage Reference and Comparator
- Eliminates External Components
- Low-cost SOT-223/SO-8/TO-92 Packages
- Operating Temperature: -40°C to +85°C

Applications

- Set-top Boxes
- Cellular Phones
- PDAs
- Energy Management Systems
- Embedded Control Systems
- Printers
- Single Board Computers

Table 1. PIN DESCRIPTION

Pin #				Pin Name	Description
TO-92 ASM1233D-L ASM1233D	TO-92 ASM1233M	SO-8	SOT-223		
1	3	4	1,4	GND	Ground.
2	1	1	2	RESET	Active LOW reset output.
3	2	2	3	V _{CC}	Power supply input.
		3, 5, 6, 7 & 8		NC	No connection.

Table 2. ABSOLUTE MAXIMUM RATINGS

Parameter	Min	Max	Unit
Voltage on V _{CC} (Note 1)	-0.5	7	V
Voltage on RESET (Note 1)	-0.5	V _{CC} + 0.5	V
Operating Temperature Range	-40	+85	°C
Soldering Temperature (for 10 sec)		+260	°C
Storage Temperature	-55	+125	°C
ESD rating	HBM	2	KV
	MM	200	V

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. Voltages are measured with respect to ground.

ASM1233D-L	3.060, 2.880, 2.720	350	Open-Drain	LOW

Application Information

Operation – Power Monitor

The ASM1233D-L/1233D/1233M detects out-of-tolerance Power supply conditions. It resets a processor during powerup, Power-down and generates a reset to the system Processor when the monitored power supply voltage is below the reset threshold. When an out-of-tolerance V_{CC}

voltage is detected, the $\overline{\text{RESET}}$ signal is asserted. On power-up, $\overline{\text{RESET}}$ is kept active (LOW) for approximately 350 ms after the power supply voltage has reached the selected tolerance. This allows the power supply and microprocessor to stabilize before $\overline{\text{RESET}}$ is released.
