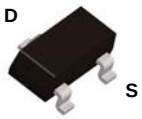
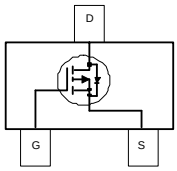
BSS84
P-Channel Enhancement Mode Field-Effect Transistor

Features

- -0.13 A, -50 V, $R_{DS(ON)}$ = 10 Ω at V_{GS} = -5 V
- Voltage-Controlled P-Channel Small-Signal Switch
- High-Density Cell Design for Low $R_{DS(ON)}$
- High Saturation Current



SOT-23



Description

This P-channel enhancement-mode field-effect transistor is produced using ON Semiconductor's proprietary, high cell density, DMOS technology. This very high density process minimizes on-state resistance and to provide rugged and reliable performance and fast switching. The BSS84 can be used, with a minimum of effort, in most applications requiring up to 0.13 A DC and can deliver current up to 0.52 A. This product is particularly suited to low-voltage applications requiring a low-current high-side switch.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. Values are at T_A = 25°C unless otherwise noted.

Symbol	Parameter		Ratings	Unit
V_{DSS}	Drain-Source Voltage		–50	V
V_{GSS}	Gate-Source Voltage		±20	V
I_D	Drain Current[1]	Continuous	–0.13	A
		Pulsed	–0.52	A
P_D	Maximum Power Dissipation[1]		0.36	W
	Derate Above 25°C		2.9	mW / °C
T_J, T_{STG}	Operating and Storage Junction Temperature Range		–55 to +150	°C
T_L	Maximum Lead Temperature for Soldering Purposes, 1/16" from Case for 10 Seconds		300	°C

Thermal Characteristics

$R_{\theta JA}$	Thermal Resistance, Junction-to-Ambient[1]	350	°C/W

Note:

1. $R_{\theta JA}$ is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{\theta JA}$ is guaranteed by design, while $R_{\theta JA}$ is determined by the user's board design.
