Description

SuperFET® II MOSFET is ON Semiconductor's brand-new high voltage super-junction (SJ) MOSFET family that is utilizing charge balance technology for outstanding low on-resistance and lower gate charge performance. This technology is tailored to minimize conduction loss, provide superior switching performance, dv/dt rate and higher avalanche energy. Consequently SuperFETII is very well suited for the Soft switching and Hard Switching topologies like High Voltage Full Bridge and Half Bridge DC-DC, Interleaved Boost PFC, Boost PFC for HEV-EV automotive.

SuperFET II FRFET® MOSFET's optimized body diode reverse recovery performance can remove additional component and improve system reliability.

Application

- Automotive On Board Charger
- Automotive DC/DC converter for HEV

Notes:

- 1: Current is limited by bondwire configuration.
- 2: Starting T_J = 25°C, L = 18.65mH, I_{AS} = 11A, V_{DD} = 100V during inductor charging and V_{DD} = 0V during time in avalanche. 3: I_{SD} ≤ 27A, di/dt ≤ 200 A/us, V_{DD} ≤ 380V, starting T_J = 25°C.
- 4: R_{0JA} is the sum of the junction-to-case and case-to-ambient thermal resistance, where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{\theta JC}$ is guaranteed by design, while $R_{\theta JA}$ is determined by the board design. The maximum rating presented here is based on mounting on a 1 in² pad of 2oz copper.
