

1/3, 1/4 Duty General-Purpose LCD Driver

## Overview

The LC75813E and LC75813T are $1 / 3$ duty and $1 / 4$ duty general-purpose LCD drivers that can be used for frequency display in electronic tuners under the control of a microcontroller. The LC75813E and LC75813T can drive an LCD with up to 344 segments directly. The LC75813E and LC75813T can also control up to 8 general-purpose output ports. Since the LC75813E and LC75813T use separate power supply systems for the LCD drive block and the logic block, the LCD driver block power-supply voltage can be set to any voltage in the range 2.7 to 6.0 volts, regardless of the logic block power-supply voltage.

## Specifications

$$
\text { Absolute Maximum Ratings at } \mathrm{Ta}=25^{\circ} \mathrm{C}, \mathrm{~V}_{\mathrm{SS}}=0 \mathrm{~V}
$$

| Parameter | Symbol | Conditions | Ratings | Unit |
| :---: | :---: | :---: | :---: | :---: |
| Maximum supply voltage | $\mathrm{V}_{\text {DD }}$ max | $\mathrm{V}_{\mathrm{DD}}$ | -0.3 to +7.0 | V |
|  | $\mathrm{V}_{\text {LCD }} \max$ | V LCD | -0.3 to +7.0 |  |
| Input voltage | $\mathrm{V}_{1 \times 1}$ | CE, CL, DI, $\overline{\mathrm{INH}}$ | -0.3 to +7.0 | V |
|  | $\mathrm{V}_{\mathrm{IN}}$ 2 | OSC | -0.3 to $\mathrm{V}_{\mathrm{DD}}+0.3$ |  |
|  | $\mathrm{V}_{\text {IN }} 3$ | $\mathrm{V}_{\text {LCD }} 1, \mathrm{~V}_{\text {LCD }} 2$ | -0.3 to $\mathrm{V}_{\mathrm{LCD}}+0.3$ |  |
| Output voltage | $\mathrm{V}_{\text {OUT }} 1$ | OSC | -0.3 to $V_{D D}+0.3$ | V |
|  | $\mathrm{V}_{\text {OUT }}{ }^{2}$ | S1 to S87, COM1 to COM4, P1 to P8 | -0.3 to $\mathrm{V}_{\mathrm{LCD}}+0.3$ |  |
| Output current | lout ${ }^{1}$ | S1 to S87 | 300 | $\mu \mathrm{A}$ |
|  | lout2 | COM1 to COM4 | 3 | mA |
|  | lout3 | P1 to P8 | 5 |  |
| Allowable power dissipation | Pd max | $\mathrm{Ta}=85^{\circ} \mathrm{C}$ | 200 | mW |
| Operating temperature | Topr |  | -40 to +85 | ${ }^{\circ} \mathrm{C}$ |
| Storage temperature | Tstg |  | -55 to +125 | ${ }^{\circ} \mathrm{C}$ |

[^0]■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.
$\square$ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

- Serial data control of frame frequency for common and segment output waveforms.
- High generality, since display data is displayed directly without decoder intervention.
- Independent $\mathrm{V}_{\mathrm{LCD}}$ for the LCD driver block $\left(\mathrm{V}_{\mathrm{LCD}}\right.$ can be set to any voltage in the range 2.7 to 6.0 volts, regardless of the logic block power-supply voltage.)
- The $\overline{\mathrm{INH}}$ pin can force the display to the off state.
- RC oscillator circuit

## Serial Data Transfer Example

1. $1 / 3$ duty
(1) When 175 or more segments are used

All 312 bits of serial data must be sent.

$\square$

| D170 D171 $\mid$ D172 | D173 | D174 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

(2) When fewer than 175 segments are used

Either 104 or 208 bits of serial data may be sent, depending on the number of segments used. However, the serial data shown below (the D1 to D87 display data and the control data) must be sent.

2. $1 / 4$ duty
(1) When 261 or more segments are used All 416 bits of serial data must be sent.

| 0 | 0 | 0 | 0 | 0 | 0 | 1 | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| BO | B1 | B2 | B3 | AO | A1 | A2 | A3 | D90

(2) When fewer than 261 segments are used

Either 104, 208 or 312 bits of serial data may be sent, depending on the number of segments used. However, the serial data shown below (the D1 to D88 display data and the control data) must be sent.

## Control Data Functions

1. P0 to P3: Segment output port/general-purpose output port switching control data.

These control data bits switch the S1/P1 to S8/P8 output pins between their segment output port and general-purpose output port functions.

| Control data |  |  |  | Output pin state |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| P0 | P1 | P2 | P3 | S1/P1 | S2/P2 | S3/P3 | S4/P4 | S5/P5 | S6/P6 | S7/P7 | S8/P8 |
| 0 | 0 | 0 | 0 | S1 | S2 | S3 | S4 | S5 | S6 | S7 | S8 |
| 0 | 0 | 0 | 1 | P1 | S2 | S3 | S4 | S5 | S6 | S7 | S8 |
| 0 | 0 | 1 | 0 | P1 | P2 | S3 | S4 | S5 | S6 | S7 | S8 |
| 0 | 0 | 1 | 1 | P1 | P2 | P3 | S4 | S5 | S6 | S7 | S8 |
| 0 | 1 | 0 | 0 | P1 | P2 | P3 | P4 | S5 | S6 | S7 | S8 |
| 0 | 1 | 0 | 1 | P1 | P2 | P3 | P4 | P5 | S6 | S7 | S8 |
| 0 | 1 | 1 | 0 | P1 | P2 | P3 | P4 | P5 | P6 | S7 | S8 |
| 0 | 1 | 1 | 1 | P1 | P2 | P3 | P4 | P5 | P6 | P7 | S8 |
| 1 | 0 | 0 | 0 | P1 | P2 | P3 | P4 | P5 | P6 | P7 | P8 |

Note: $\operatorname{Sn}(\mathrm{n}=1$ to 8 ): Segment output ports
$\mathrm{Pn}(\mathrm{n}=1$ to 8 ): General-purpose output ports

Also note that when the general-purpose output port function is selected, the output pins and the display data will have the correspondences listed in the tables below.

| Output pin | Corresponding display data |  |
| :---: | :---: | :---: |
|  | $1 / 3$ duty | $1 / 4$ duty |
| S1/P1 | D1 | D1 |
| S2/P2 | D4 | D5 |
| S3/P3 | D7 | D9 |
| S4/P4 | D10 | D13 |
| S5/P5 | D13 | D17 |
| S6/P6 | D16 | D21 |
| S7/P7 | D19 | D25 |
| S8/P8 | D22 | D29 |

For example, when $1 / 4$ duty drive scheme is used, if the general-purpose output port function is selected for the S4/P4 output pin, that output pin will output a high level ( $\mathrm{V}_{\mathrm{LCD}}$ ) when the display data D 13 is 1 , and a low level $\left(\mathrm{V}_{\mathrm{SS}}\right)$ when the D 13 is 0 .
2. DR: $1 / 2$ bias drive or $1 / 3$ bias drive switching control data

This control data bit selects either $1 / 2$ bias drive or $1 / 3$ bias drive.

| DR | Bias drive scheme |
| :---: | :---: |
| 0 | $1 / 3$ bias drive |
| 1 | $1 / 2$ bias drive |

3. DT: $1 / 3$ duty drive or $1 / 4$ duty drive switching control data

This control data bit selects either $1 / 3$ duty drive or $1 / 4$ duty drive.

| DT | Duty drive scheme | Output pin state (COM4/S87) |
| :---: | :---: | :---: |
| 0 | $1 / 4$ duty drive | COM4 |
| 1 | $1 / 3$ duty drive | S87 |

Note: COM4: common output
S87: segment output
4. FC: Common and segment output waveforms frame frequency setting control data

This control data bit sets the frame frequency for common and segment output waveforms.

| FC | Frame frequency $\mathrm{fO}[\mathrm{Hz}]$ |
| :---: | :---: |
| 0 | $\frac{\text { fosc }}{384}$ |
| 1 | $\frac{\text { fosc }}{192}$ |

5. SC: Segments on/off control data

This control data bit controls the on/off state of the segments.

| SC | Display state |
| :---: | :---: |
| 0 | On |
| 1 | Off |

However, note that when the segments are turned off by setting SC to 1 , the segments are turned off by outputting segment off waveforms from the segment output pins.
6. BU: Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

| BU | Mode |
| :---: | :--- |
| 0 | Normal mode |
| 1 | Power saving mode (The OSC pin oscillator is stopped, and the common and segment output pins go to the $V_{\text {SS }}$ level. However, <br> the S1/P1 to S8/P8 output pins that are set to be general-purpose output ports by the control data P0 to P3 can be used as <br> general-purpose output ports.) |

## Display Data to Segment Output Pin Correspondence

## The $\overline{\mathrm{INH}}$ pin and Display Control

Since the IC internal data ( $1 / 3$ duty: the display data D1 to D261 and the control data, $1 / 4$ duty: the display data D1 to D344 and the control data) is undefined when power is first applied, applications should set the $\overline{\mathrm{INH}}$ pin low at the same time as power is applied to turn off the display (This sets the S1/P1 to S8/P8, S9 to S86, COM1 to COM3, and COM4/S87 to the $\mathrm{V}_{\text {SS }}$ level.) and during this period send serial data from the controller. The controller should then set the $\overline{\mathrm{INH}}$ pin high after the data transfer has completed. This procedure prevents meaningless displays at power on. (See Figures 3 and 4.)

## Notes on the Power On/Off Sequences

Applications should observe the following sequences when turning the LC75813E and LC75813T power on and off.

- At power on: Logic block power supply $\left(\mathrm{V}_{\mathrm{DD}}\right)$ on $\rightarrow \mathrm{LCD}$ driver block power supply $\left(\mathrm{V}_{\mathrm{LCD}}\right)$ on
- At power off: LCD driver block power supply $\left(\mathrm{V}_{\mathrm{LCD}}\right)$ off $\rightarrow$ Logic block power supply $\left(\mathrm{V}_{\mathrm{DD}}\right)$ off

However, if the logic and LCD driver block use a shared power supply, then the power supplies can be turned on and off at the same time.

1. $1 / 3$ duty

Figure 3
2. 1/4 duty

Figure 4

## Notes on Controller Transfer of Display Data

Since the LC75813E and LC75813T accept the display data (D1 to D261) divided into three separate transfer operations when using $1 / 3$ duty drive scheme and the data (D1 to D344) divided into four separate transfer operations when 1/4 duty drive, we recommend that applications transfer all of the display data within a period of less than 30 ms to prevent observable degradation of display quality.

## Sample Application Circuit 1

1/3 Duty, 1/2 Bias (for use with normal panels)

Note: *2 When a capacitor except the recommended external capacitance ( $\operatorname{Cosc}=1000 \mathrm{pF}$ ) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF .

## Sample Application Circuit 2

1/3 Duty, 1/2 Bias (for use with large panels)

Note: *2 When a capacitor except the recommended external capacitance (Cosc $=1000 \mathrm{pF}$ ) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF .

## Sample Application Circuit 3

1/3 Duty, 1/3 Bias (for use with nornal panels)

Note: *2 When a capacitor except the recommended external capacitance (Cosc $=1000 \mathrm{pF})$ is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF .

## Sample Application Circuit 4

1/3 Duty, 1/3 Bias (for use with large panels)

Note: *2 When a capacitor except the recommended external capacitance ( Cosc $=1000 \mathrm{pF}$ ) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.

## Sample Application Circuit 5

1/4 Duty, 1/2 Bias (for use with normal panels)

Note: *2 When a capacitor except the recommended external capacitance (Cosc $=1000 \mathrm{pF}$ ) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF .

## Sample Application Circuit 6

1/4 Duty, 1/2 Bias (for use with large panels)

Note: *2 When a capacitor except the recommended external capacitance (Cosc $=1000 \mathrm{pF}$ ) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF .

## Sample Application Circuit 7

1/4 Duty, 1/3 Bias (for use with nornal panels)

Note: *2 When a capacitor except the recommended external capacitance (Cosc $=1000 \mathrm{pF}$ ) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF .

## Sample Application Circuit 8

1/4 Duty, 1/3 Bias (for use with large panels)

Note: *2 When a capacitor except the recommended external capacitance ( Cosc $=1000 \mathrm{pF}$ ) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
