Spread Spectrum Clock Generator

Description

PCS3P2191A is a versatile spread spectrum frequency modulator that generates four low EMI 4x clocks at the output. PCS3P2191A offers seven selectable centre spread options of $\pm 0.5\%$ to $\pm 2.0\%$, and a no spread option. (Refer to *Spread Deviation Selection Table*). PCS3P2191A reduces electromagnetic interference (EMI) at the clock source, allowing system wide reduction of EMI of all clock dependent signals. The PCS3P2191A allows significant system cost savings by reducing the number of circuit board layers, ferrite beads, and shielding that are traditionally required to pass EMI regulations. The PCS3P2191A uses the most efficient and optimized modulation profile approved by the FCC and is implemented in a proprietary all digital method. The Device is available in 16-Pin TSSOP package, in Commercial and Industrial temperature range.

Application

PCS3P2191A is targeted for LCD panel application.
