PECL-to-TTL  
TRANSLATOR****Precision Edge®  
SY10ELT21  
SY100ELT21****FEATURES**

- 2.5ns typical propagation delay
- Low power
- Differential PECL inputs
- 24mA TTL outputs
- Flow-through pinouts
- Available in 8-pin SOIC package

**Precision Edge®****DESCRIPTION**

The SY10/100ELT21 are single differential PECL-to-TTL translators. Because PECL (Positive ECL) levels are used, only +5V and ground are required. The small outline 8-lead SOIC package and low skew single gate design make the ELT21 ideal for applications that require the translation of a clock or data signal where minimal space, low power, and low cost are critical.

The  $V_{BB}$  output allow differential single-ended, or AC-coupled interface to the device. If used, the  $V_{BB}$  output should be bypassed to  $V_{CC}$  with a 0.01 $\mu$ F capacitor.

The ELT21 is available in both ECL standards: the 10ELT is compatible with positive ECL 10H logic levels, while the 100ELT is compatible with positive ECL 100K logic levels.

**PIN NAMES**

Pin	Function
Q	TTL Output
D, /D	Differential PECL Inputs
$V_{CC}$	+5.0V Supply
$V_{BB}$	Reference Output
GND	Ground

**NOTE:**

1. Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to ABSOLUTE MAXIMUM RATING conditions for extended periods may affect device reliability.

**NOTES:**

1. Part-to-Part Skew considering HIGH-to-HIGH transitions at common  $V_{CC}$  levels.
2. These parameters are guaranteed, but not tested.
3. Frequency at which output levels will meet a 0.8V to 2.0V minimum swing.
4. The  $f_{MAX}$  value is specified as the minimum guaranteed maximum frequency. Actual operational maximum frequency may be greater.
5. 200mV input guarantees full logic at output.
